

Lift Loft Installation

Unfold Lift Loft across the inside of canopy frame. Install the Lift Loft across the front (bow end of boat) of the canopy frame end by looping the black buckle strap around the canopy frame and then snapping the buckle together. Leave the tension loose. Work your way around each side attaching the buckles in the same manner. After the Lift Loft is installed, adjust so the Loft is evenly spaced on the canopy frame and adjust the tension on the buckles accordingly by pulling on the loose end of the black webbing that is on the buckle.

Care & Safety:

- Do not climb on, hang from or crawl on Lift Loft, bodily injury may occur.
- Do not store hard or heavy objects, (anchors, bricks, etc).
- Always supervise children around the Lift Loft and water.
- Do not store more than 90lbs on the Lift Loft.
- Remove lift loft for seasonal storage as high winds and heavy snow loads may damage loft.
